

# LIFE SCIENCES COMPANY FREES UP RESOURCES BY UTILIZING DOMESTIC SOURCING

## CHALLENGE

Auxilium needed a long-term partner that could be flexible and nimble with the IT needs of a dynamic organization. As the company has grown their product portfolio and revenues, the needs for systems and skilled IT professionals has grown. Strategically, Auxilium wants to maintain a lean internal IT staff while implementing state of the art systems to support the growing business.

## SOLUTION

Rural Sourcing provided the resources necessary to do the "heavy lifting" of systems implementation and ongoing systems support. Rural Sourcing helped with Auxilium's SAP ECC 6.0, Solution Manager and BPC server support and maintenance needs as well as aided in system upgrades and Auxilium's RFID implementation.

## RESULTS

Rural Sourcing has been able to take the pressure of day-to-day support and maintenance off of Auxilium's internal team, helping them keep a lean IT department. In turn, this has freed up resources to focus on R&D, product portfolio development and other business investments.

Having the support necessary for their ERP systems from Rural Sourcing has enabled Auxilium to implement and maintain first-class commercial systems without adding the headcount necessary to maintain these systems. This in turn frees up valuable resources that can be used to invest in the health of people around the world.

Rural Sourcing is able to be agile and nimble with the changing business needs and growth of Auxilium. Due to our unique domestic sourcing model, we are able to provide our services and deploy quickly at an affordable cost. The team is built to scale with growing companies that have continually changing business needs and our teams are familiar with the culture and business practices of our clients.

**Technologies: SAP, BASIS, ABAP, Security**

## ABOUT RURAL SOURCING

Rural Sourcing (RSI) offers a cost effective, agile approach to software development, support and maintenance of critical business and cloud applications. By providing an alternative to offshore outsourcing, RSI eliminates the obstacles of time zones, distance, language, and geopolitical risks. With development centers strategically located throughout the United States, RSI leverages untapped, highly skilled IT resources in smaller cities to provide world-class solutions for Fortune 1000 clients across various industries including consumer & retail goods, financial services, healthcare, hi-tech, insurance, and pharmaceutical.
